Sustainable buffet options designed for flexibility

None of us will forget the year 2020 in a hurry as we all coped with the consequences of the corona virus impacting our daily lives, families, and businesses. The hospitality industry was one of the worst hit globally as restrictions on travel and dining out were implemented everywhere. now with the roll out of vaccines and a return to travel, we can be hopeful that 2021 will be a much better year for our industry.

Before anyone ever heard of Covid 19, EcoBurner were already influencing changes to buffets around the world. Consumer attitudes towards sustainability is rising rapidly so more hotel managers want systems that reduce their impact on the environment. EcoBurner provides just that - less CARBON, zero WASTE and eliminates WATER usage in addition to better presentation options.

As we've all been adapting to our new normal, our product team at EcoBurner have finalised the much-anticipated EcoServe GN which is built with the architecture of commercial

kitchens in mind. Chefs can now use standard GN sized dishes for cooking with and go straight to presentation on the EcoServe GN. Our waterless replacement to chafing dishes opens up more opportunity for flexibility as EcoServe is modular so buffets can be designed according to a hotels' style, occupancy levels or different location.

Our mission is to eliminate water usage and replace single-use gel and wick pots that are often used to heat buffets everywhere. We believe they have no place in the modern hospitality setting as they can be dangerous to handle, toxic to the environment and create vast amounts of unnecessary waste. We also want to make it easier for chefs to create premium displays of buffets.

The EcoBurner team are headquartered in Waterford, Ireland and we work with a vast network of distributors around the world so that hotels everywhere can benefit from the EcoBurner system.

“ Our core values are safety, protection of the environment and care for our global community of partners, customers and staff.

Introducing EcoServe GN

Our EcoServe range has been welcomed by hotels since launch but the one key piece of feedback that we get from customers is that they would like to see it in a GN sized version. Commercial kitchens around the world are often built around the standard GN sizing so we've developed an EcoServe to suit.

This new addition to the range brings more options for buffet display and its modern look appeals to chefs seeking premium presentation options.

Eliminates Water

No more wasted energy heating up water and no need to carry water to the buffet making it safer for staff.

Quick & Safe

Hot in less than 10 minutes means you're set up and ready for guests quicker and changing food dishes is now a simple process of just replacing the serving dish.

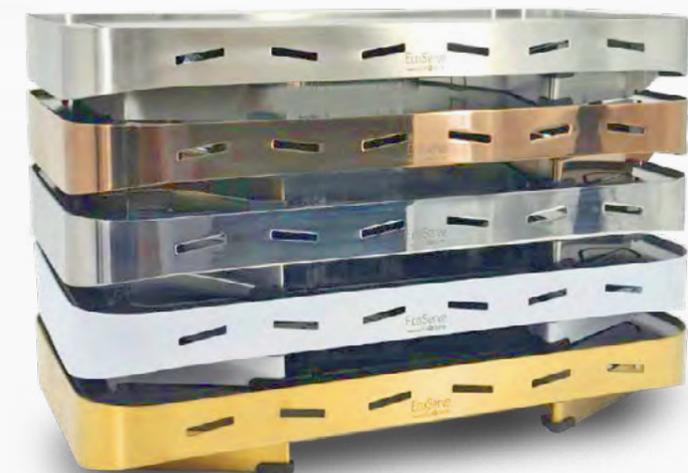

Flexible

No electricity not only means no dangerous cables but also gives chefs the flexibility to use more or less EcoServe units in any location they choose allowing buffets to be redesigned to suit their needs and occupancy levels.

Convenient Storage

Space is often at a premium when it comes to storing buffet equipment, so we've designed the EcoServe GN with folding legs. This allows them to be stacked neatly for easy space-saving storage when not in use.

EcoServe GN is available to order in six colours

Buffet food deserves to be presented in the most elegant way and the EcoServe GN gives chefs this opportunity to showcase their creations for maximum impact. It's innovative style and shape is unique; guests can see exactly what is available and chefs have complete autonomy to change the look of the buffet according to their own style.

Available in six colours with an option to add a reinforced glass lid which includes a soft close hinge that can be adjusted according to the height of the dish being used. It features an intelligent condensation recirculating system whereby any condensate is quickly captured, returned to the heat source and evaporated before build-up, giving guests a clear view of the delicious food on offer.

Single Serve Options

The corona virus forced us all to think about safer ways to serve food in a pandemic world and we saw so many innovative products fill our newsfeeds. Our response was to introduce single-serve dishes to work with our EcoServe GN so that guests can 'grab n go' without having to touch anything other than their own portion. This unveiled further benefits that we think will stick around post-pandemic.

We all know that buffet is the most economical way to feed a large group of people and our single-serve dishes mean that chefs can still pre-prepare large quantities of food, ready for consumption when guests arrive. The 'grab n go' concept minimises guests handling of food while allowing for much more portion control meaning less food waste and the continuation of buffet as a method of food service that is more efficient than ever.

“ The corona virus forced us all to think about safer ways to serve food in a pandemic world and we saw so many innovative products fill our newsfeeds.

Portion Control

Different size dishes allow for different amounts of food such as 200g rice or 60g salmon. Guests are less likely to over-indulge as they'll usually pick up single individual portions leading to less food waste overall.

Single-serve dish and lid - large (6 per EcoServe GN)

Fresher Food

Dishes can be replenished on a first-in, first-out basis meaning no more food left in corners of dishes for too long.

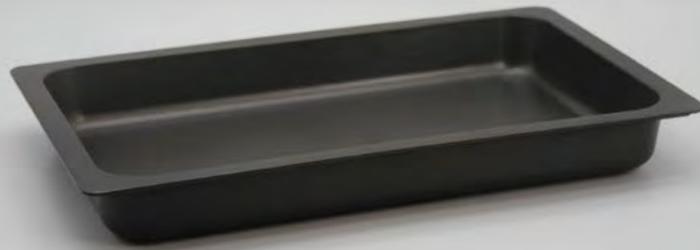

Single-serve dish and lid - square (8 per EcoServe GN)

No Cross-Contamination

No shared utensils reduces cross-contamination and guests can be confident that no one else has touched their food.

Single-serve dish and lid - small (12 per EcoServe GN)

Premium Non-Stick Aluminium Dish - GN 1/1

RAK 6.5cm Deep Porcelain Dish - GN 1/1

RAK 2cm Shallow Porcelain Dish - GN 1/1

≡ EcoServe GN 1/1 Dishes

To compliment the EcoServe GN, we've partnered with RAK Porcelain to bring you a choice of robust, chip resistant GN 1/1 dishes. The RAK 6.5cm Deep Porcelain Dish has a capacity of 8.9 litres while the RAK 2cm Shallow Porcelain Dish is more suited to displaying food such as canapes.

Porcelain is a popular choice for buffet displays everywhere but sometimes commercial kitchens may require a less breakable choice, so we've designed an aluminium dish to suit. Boasting superior thermal conductivity, exceptional durability and resistance to abrasion, this dish has a unique 3-layer reinforced Lotan non-stick surface that can be used for frying, baking and serving making it ideal for use in kitchen to EcoServe buffet.

“ Add a Cool Pack accessory to easily convert your EcoServe to keep foods chilled

≡ EcoServe GN Cool Pack

The Cool Pack is designed to make your EcoServe GN even more flexible by allowing you to switch between hot and cold dishes when needed. Simply freeze the EcoServe GN Cool Pack overnight before use and place directly on the EcoServe to keep chilled dishes cool so you can now present salads as part or your EcoServe buffet display.

EcoServe GN Cool Pack

EcoServe Round

EcoServe Round features all the benefits of the GN but increases the choice for chef to use different shapes and sizes to create unique and memorable guest experiences.

Available in two sizes and six colours, the full range of EcoServe allows chef to create their own tailor-made buffets using different configurations in varying locations.

This means catering for large or smaller events can be easily achieved resulting in beautiful buffet presentations using less carbon, less waste, and less water.

“EcoServe Round features all the benefits of the GN but increases the choice for chef to use different shapes and sizes to create unique and memorable guest experiences.”

EcoServe Round Accessories

Cookware is an important element to buffet design, so we offer a carefully chosen selection to help chefs achieve their desired style. We also offer large and small Round Glass Lids so that you can purchase a selection of porcelain and aluminium dishes that fit the same lid.

A handy Pot Lid/ Spoon Rack is available so there is somewhere to store these accessories during service.

Premium Non-Stick Aluminium Dish

Unique in design, the base of the dish is designed to dock securely with the EcoServe that ensures maximum heat transfer and minimal movement. The coating used is one of the most premium non-stick high quality coatings available and it offers exceptional durability and resistance to abrasion so is ideal for use in commercial kitchens where a more robust choice is preferred.

RAK Porcelain

RAK Porcelain are known in hotels around the world for their robust table-top solutions that enhance lifestyle dining experiences. RAK Round dishes that dock into the EcoServe securely are available in both large and small sizes. The large has a capacity of 5.4L and the capacity of the small is 3.6L.

Glass Lids

Available in two sizes, large and small – these glass lids are designed to fit both the RAK and aluminium round dishes so that you can mix your cookware for different styles and benefit from using the same-sized lids. They can be bought individually with the handle attached or in packs of 10 with the handle included but not attached.

EcoServe Cool Pack

Simply replace the heatpan on the EcoServe Round with a frozen Cool Pack to easily switch your EcoServe to cold service. Having this flexibility to easily change the use of your EcoServe is ideal for adjusting the menu according to your needs without having to change your equipment entirely.

≡ New Build Buffets or Retrofits

Flexibility is a key factor when designing buffets, especially in today's hospitality climate where occupancy rates can vary dramatically. The planning stage of a new hotel or buffet is the best time to design how any buffet will appear and function smoothly. It is at this time that induction buffets are often installed at great cost but with no flexibility for changes that occur in the future.

That is why it is hugely beneficial to consider EcoServe at this stage because it is completely modular, so can be adjusted according to any chefs' unique style, buffet location or hotel occupancy rate. There are many other benefits to choosing EcoServe over induction, so we have compared both.

Induction Buffet

- Fixed position - no opportunity to change style or location
- If low occupancy, there's empty induction plates which looks unappealing to guests
- Requires electricity & power outlets
- Electric cables can cause trip hazards
- Chefs can't design buffet layout
- High purchase costs
- High design & installation costs
- High repair & maintenance costs

EcoServe

- Flexible locations - easy to move outdoors or changed style for different occasions
- If low occupancy, use less EcoServe units for better presentation
- No electricity or outlets needed
- No electric cables required
- Chefs can design their own buffet layout according to style or occupancy
- Low purchase costs
- No design or installation costs
- Minimal repair and maintenance costs

Powered by EcoBurner

The EcoBurner is at the heart of everything we do. We firmly believe that traditional methods for heating buffets such as gel or wick chafing fuels are very outdated and if launched today would never make it near a modern hospitality setting.

The refillable burner is simply placed either below any of our EcoServes or below any existing chafing dishes to create consistent heat that is better for the environment and safer to use. Our fuel cans contain five full refills allowing for up to 38 hours of burn time per can.

Safe and Sustainable Buffets

Safer Buffets

In addition to the many environmental benefits of switching to EcoBurner, our system is the safer option. Any hotel manager that has used gel or wick pots knows the possible dangers such as the pots falling over accidentally and igniting. Nobody should take that risk to staff or guests.

The chemicals within gels or wicks are often poisonous if ingested and special protection equipment is recommended when handling them so it's not surprising that many corporate level managers are taking the decision to ban gels and wicks on their premises.

Cool to Touch

Patented safety devices within the EcoBurner means it never gets too hot to handle.

Automatic Shut-Off

Accidents happen but if the EcoBurner is knocked over, it instantly switches off preventing any risk of fire spreading.

No Open Chemicals

Gel and wicks are made up of chemicals that are poisonous to ingest and should never be used near food, this is not the case with EcoBurner.

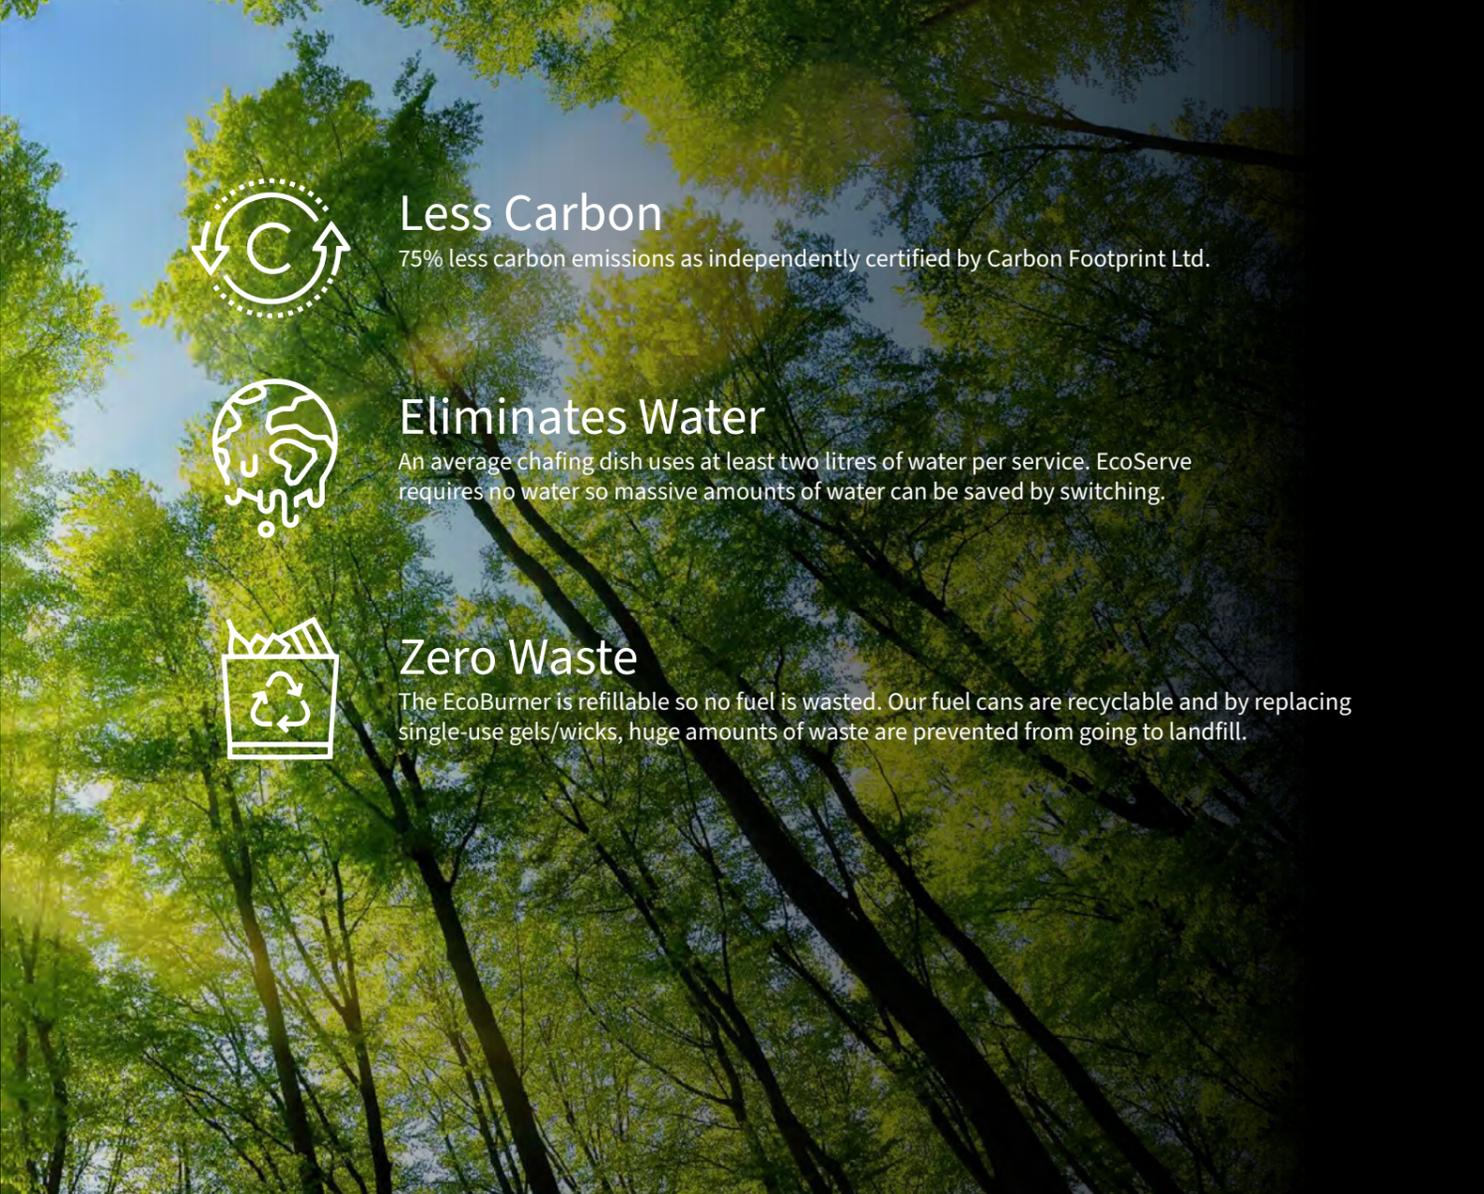

**MATERIAL
SAFETY
DATA
SHEETS**

EcoBurner is non-toxic, requires no PPE and is fully approved for use in the vicinity of food. Our MSDS sheet carries much fewer warnings than any gel or wick product.

As EcoBurner fuel burns in the EcoBurner, it produces minimal Carbon Monoxide making it a safer choice for heating buffet near staff and guests.

Less Carbon

75% less carbon emissions as independently certified by Carbon Footprint Ltd.

Eliminates Water

An average chafing dish uses at least two litres of water per service. EcoServe requires no water so massive amounts of water can be saved by switching.

Zero Waste

The EcoBurner is refillable so no fuel is wasted. Our fuel cans are recyclable and by replacing single-use gels/wicks, huge amounts of waste are prevented from going to landfill.

Sustainable Buffets

Awareness of how travel impacts the environment is increasing among hotel guests, and hotels are catering to this demand by ensuring their practices are sustainable. All major hotels brands are now committed to limiting the negative impacts of their activities and many have implemented extensive initiatives to measure and reduce their energy, water, carbon and waste. Replacing gel or wick chafing fuel with EcoBurner is a simple step that any hotel can take to reduce their carbon, eliminate water usage and cut their waste to landfill.

Gels and wicks are usually only ever used once making them single-use items that go straight to landfill with leftover chemicals remaining inside. This isn't acceptable for the environment and we have a sustainable alternative that uses less carbon and can eliminate the need for single-use gel and wicks.

“ 75% less carbon emissions as independently certified by Carbon Footprint Ltd.

One EcoBurner fuel can = at least 18 (2-hour) chafing fuel pots.

Product used for typical 3-hour catering event	Total Emissions (gCO2e)
Industry Standard (ethanol)	723
Industry Standard (methanol)	520
Industry Standard (DEG)	466
Induction Heater	1449
EcoBurner	159

Convert your Existing Equipment

You can easily convert your existing buffet equipment to be Powered by EcoBurner by placing an EcoBurner directly beneath your chafing dishes and using EcoBoost to maximise its efficiency. This gives you all the safety and environmental benefits without investing in all new EcoServe units.

EcoBoost

To maximise fuel efficiency, we recommend using the EcoBoost MAX. Simply attach an EcoBoost bracket to the bottom of any chafing dish so that it brings the EcoBurner closer to the dish and creates a windproof heat chamber that disperses the heat more effectively.

EcoBoost reduces the amount of fuel needed to keep food warm and enhances the wind proofing benefits so is ideal for outdoor use in any catering situation.

“

EcoBoost reduces the amount of fuel needed to keep food warm and enhances the wind proofing benefits so is ideal for outdoor use in any catering situation.

EcoBoost Demo Kit

An EcoBoost Demo Kit is available to EcoBurner distributors or sales reps to help demonstrate the benefits of EcoBoost MAX effectively to end-users. It consists of two EcoBoost MAX brackets with very strong magnets attached. Distributors or sales personnel can temporarily attach the brackets to a chafing dish, slide the EcoBurner into place and show how the heat chamber disperses heat more effectively before an end-user commits to attaching EcoBoost MAX to their chafing dishes.

The demo kit is only for demonstration purposes and should never be used instead of EcoBoost MAX.

EcoBoost MINI

Some hotels simply can't attach the EcoBoost MAX to their chafing dishes so the MINI will do as an alternative in these cases, but we do recommend using EcoBoost MAX as it will be more efficient. The EcoBoost MINI clips onto the top of the EcoBurner to prevent heat being deflected back onto the EcoBurner to improve efficiency and is an easy way to start using the EcoBurner under any chafing dish.
